**AI is fast evolving as the default interface
between humans and their most loved companion
gadget - Smartphone!**

Evolution of AI in Smartphones

2017: AI/ML Smartphone Era Begins

Google Pixel 2 introduced Portrait mode and improved HDR, Apple iPhone 8/X featured a Neural Engine for ML tasks, and Huawei Mate 10 launched with AI object recognition powered by NPU.

Pre-ChatGPT Era

2018: Smarter Assistants and Smarter Systems

Panasonic Arbo debuted as an AI-powered virtual assistant designed to personalize the smartphone experience, while Google introduced Adaptive Battery with Android 9, using AI/ML to optimize how apps consume phone batter

OpenAI launched ChatGPT, bringing generative AI into the mainstream

2023: Generative AI Impact

Google Pixel 8 showcased AI for facial expression selection, while Qualcomm developed processors for enhanced AI acceleration.

2024: Galaxy AI Launch

Samsung Galaxy S24 launched with the Galaxy AI suite, marking the start of the proprietary AI trend among smartphone brands, emphasizing on-device AI capabilities and paving the way for agentic AI integration in future devices.

Post-ChatGPT Era

AI Smartphones in India

* Also includes additional 14 smartphone models released prior to 2023 that have also been upgraded to include AI features. 2025 numbers are as of Jan 31st, 2025.

-  Equipped with AI features out of box
-  Upgraded to include AI features

The Tecno Pova 6 Neo is the most affordable AI-enabled smartphone in India, while the Samsung Galaxy Z Fold 6 is the most expensive AI-powered smartphone available.

AI Smartphone Price Spread

AI in smartphones has various flavours and hues. Smartphone makers have incorporated several features ranging from content editors to content generation use cases.

With this wide application and variations in AI implementations, smartphones with some AI integrations are available across various price ranges.

Among the smartphone brands, Samsung offers the widest range of AI smartphones followed by Google and OnePlus in that order.

Types of AI

AI by Origin

Third-party AI

Third-party AI refers to features powered by external LLMs, such as, Google's Gemini, OpenAI's ChatGPT, and Meta's Llama. These AI features are often cloud-based and provide common features across multiple devices.

Proprietary AI

Proprietary AI includes features developed in-house by smartphone brands, tailored specifically for their devices, such as, Samsung's Galaxy AI for real-time translation and camera optimisation, Apple's Apple Intelligence for enhancing Siri and photo editing, and Motorola's Moto AI for organising information and simplifying tasks.

AI by Outcome

Generative AI

It refers to AI systems designed to create new content, such as text, images, audio, or video, based on patterns learned from existing data. Examples include tools like OpenAI's ChatGPT for text generation, DALL-E for image creation.

Agentic AI

It refers to AI systems that act autonomously to achieve specific goals or tasks, often mimicking human decision-making processes. These systems can plan, learn, and adapt in real-time. Examples are virtual assistants like Siri or Gemini, and also AI features that help in battery optimisation and display colour tone.

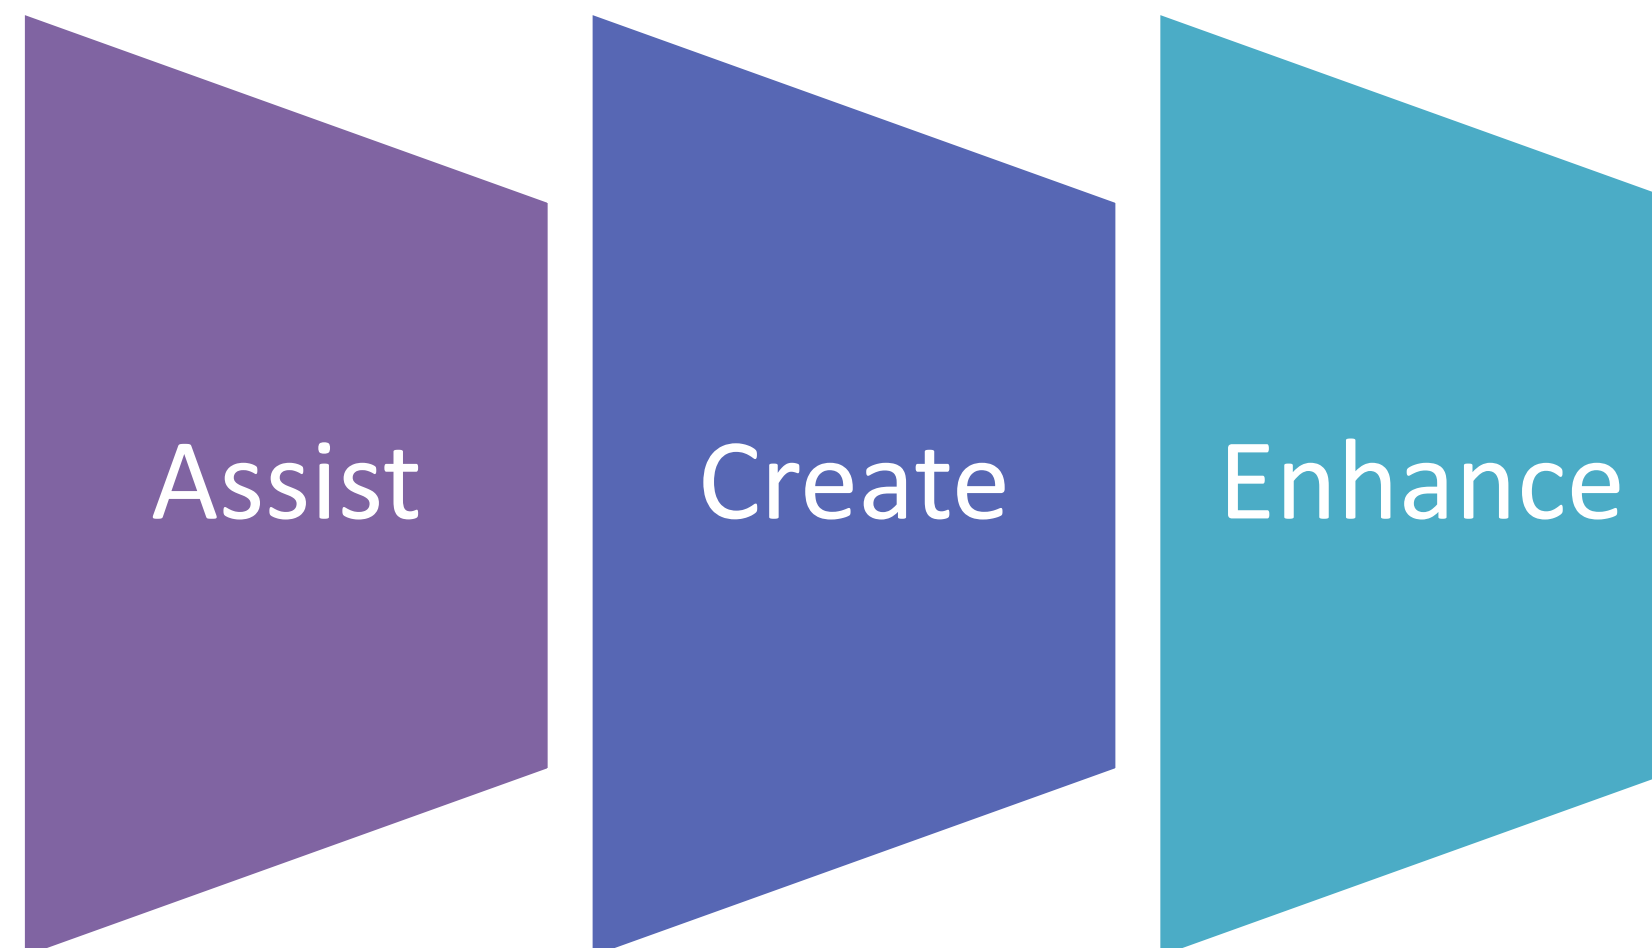

Key AI Features

| Third Party | | Proprietary | |
|--|--|--|--|
| ChatGPT | Gemini | Galaxy AI | Moto AI |
| Voice Assistant Integration Voice Control | Gemini AI Assistant Gemini Live Circle to Search Live Translation Photo Editor Magic Eraser Sketch to Image AI Zoom Enhance AI Image generator Photo Unblur Best Take Add Me Video Boost AI Generated Summary Smart Reply Call Notes AI Wallpaper Context Aware Screenshot Voice Assistant Integration | AI Powered Notes Sketch to Image Writing Assistant Real Time Call Translation Real Time Interpreter Personalised Information Voice Recording to Text Summary | AI Intelligent Search Voice Recording to Text Summary Context Aware Screenshot |

ACE Framework

The ACE framework designed by Techarc to benchmark AI smartphones holistically covers all the features and use cases that are powered by artificial intelligence.

All the features, whether powered by Generative AI or Agentic AI are categorised in **Assist**, **Create** and **Enhance** elements basis the value addition they bring to the smartphone experience.

01

Assist

Agentic AI features that help users organizing calendar, scheduling, and data retrieval.

02

Create

Generative AI-driven tools that create new content, like text, images, or music, based on user prompts or inputs.

03

Enhance

AI capabilities that improve existing content, such as refining images, optimising videos, or improve connectivity.

ACE@AI Brands

ACE @ AI

| Other AI Smartphone Brands | |
|----------------------------|---------|
| Apple | CMF |
| Honor | Infinix |
| iQoo | Nothing |
| OnePlus | Oppo |
| Poco | Realme |
| Redmi | Tecno |
| Vivo | |

Ordered Alphabetically

The ACE framework evaluated all the smartphone brands that have announced any kind of AI integration. During evaluation all the AI features (proprietary or third-party), or generative or agentic, were categorised into Assist, Create and Enhance. However, three brands, Google, Motorola and Samsung (ordered alphabetically), distinctly stand out other brands. The key criteria that distinguishes these three brands than others are listed below:-

- At least one feature each in Assist, Create and Enhance resulting in a holistic AI experience.
- Significantly higher number of features each in Assist, Create and Enhance increasing the use cases.
- Proprietary AI features that are creating unique distinctive brand specific AI experiences.
- AI smartphone range is wide in terms of price points serving different market segments.
- AI is officially available in these brands in India either in alpha or beta mode.
- These brands are specifically promoting AI giving them a top of mind recall advantage.

techarc

NOTE: In our methodology, we have not done any competitive ranking using ACE framework. This is because its paramount to have user experiences incorporated while ranking AI capabilities and experiences. As we are in early stage of AI smartphone usage, there isn't enough time period for which users will have an opinion. Right now, AI has a wow factor, which could swing the rankings positively.
